

EAST COAST, USA

Leading Pharmaceuticals Company

“We tried other camera systems but found them complicated and time-consuming to operate. But with Samsara Machine Vision, I was able to set up an inspection by myself in just a few hours without any training.”

— Operations Manager

A luxury skincare manufacturer active across multiple international markets invested in Samsara to transform their quality control process. Hoping to resolve longstanding inconsistencies with date and lot codes, the manufacturer resorted to paying a

contractor for manual product inspections after experiencing difficulties with other machine vision solutions. With Samsara Machine Vision however, the customer was able to set up automated inspections on their own in less than a day, drastically reducing their product inspection costs and time to value.

MADE FOR HUMANS

The customer can inspect date codes and lot codes in just a few clicks, saving them countless hours of programming time and making it easier to inspect new products.

ENHANCED EFFICIENCY

Always-on cameras eliminate manual QA costs and enable seamless changeovers.

CENTRALIZED DASHBOARD

Whether on site or on the go, the customer can instantly review production quality metrics and reduce blind spots.
