Leading Water Supplier

“Thanks to Samsara Machine Vision automatically triggering our product line to stop, we were able to discover an issue with our printer within seconds while we were away from our factory floor. Usually these faults would go unnoticed for at least 30 minutes.”

— PLC Technician

A leading water supplier offering bottled water and water filtration service across the United States invested in Samsara Machine Vision to automate inspections of date codes and eliminate the need for manual quality checks. The solution helps the

customer detect and resolve printing errors within seconds, avoiding costly production issues that would otherwise go unnoticed using their previous workflow.

• TOTAL VISIBILITY

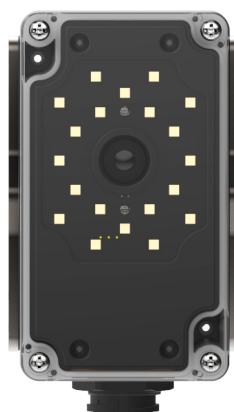

With integrated traceability, the customer is able to analyze real-time and historical production data, enabling them to identify printing issues much faster.

• CENTRALIZED DASHBOARD

Whether on site or on the go, the customer can instantly review production quality metrics and reduce blind spots.

• INTEGRATED WORKFLOW

By connecting Machine Vision to PLCs, the customer enables cameras to stop the production line when issues are detected, preventing production problems from developing into costly recalls.
