

Panic Button

Data Sheet

OVERVIEW

The Panic Button is an easy-to-use accessory that allows drivers to alert fleet managers in the event of an emergency or high risk scenario. When pushed, the button immediately sends an alert to managers with captured video footage (for customers equipped with a Samsara AI dash cam). This is an accessory for the Samsara Vehicle Gateway VG34.

HIGHLIGHTS

- Upon pushing the Panic Button, an automatic alert with the exact GPS coordinates of the vehicle are delivered via email, SMS, or API, and in the Samsara dashboard.
- Fleets with AI dash cams, both single or dual-facing, can choose to automatically capture and upload footage when the Panic Button is pressed.

Requires Samsara VG.

Software included in VG license or CM-only license, sold separately.

SPECIFICATIONS

- **Enhanced Alerting:** Customers can press the button to trigger an alert to managers via SMS, email, or API. Alerts can also be configured to display a red alert banner in the Fleet Overview page of the Samsara dashboard to quickly draw attention to an event.
- **Automated Video Retrieval:** The Panic Button alert can be configured to include a link to a Samsara dashboard page with captured footage of the event (10 seconds before and 20 seconds after the button is pushed).
