

# Connect Your Fleet With Samsara's WiFi Hotspot

# Introduction

Included in Samsara's VG-series vehicle-tracking gateways, the WiFi Hotspot supplies in-vehicle Internet for drivers to log hours of service, manage work orders, and collaborate – all at no additional cost.

## **Improves driver productivity**

By enabling drivers to access online productivity tools like email and work-order management systems, WiFi connectivity reduces error-prone manual processes, streamlines communication between drivers and office staff, and simplifies record keeping.

## **Improves customer service**

Consistent connection for faster order processing and dispatching

## **Eliminates cellular data fees**

Connect WiFi devices to the Internet without monthly data fees

# WiFi Hotspot solution overview

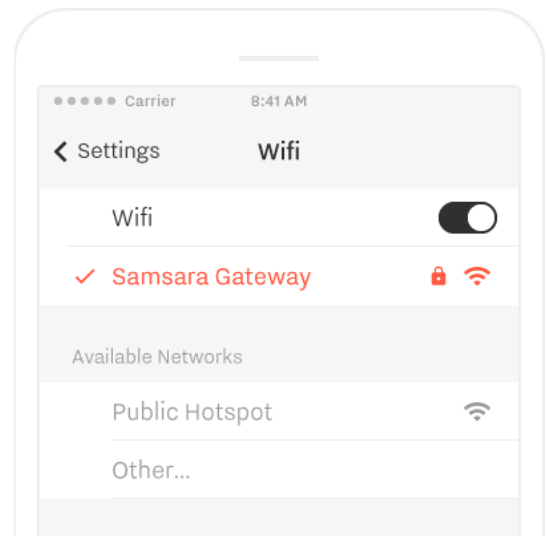

## Connect to Online Productivity Apps

- Works with all mobile devices and laptops
- Ideal for Samsara Driver App, maps and navigation, work-order management, email, and CRM

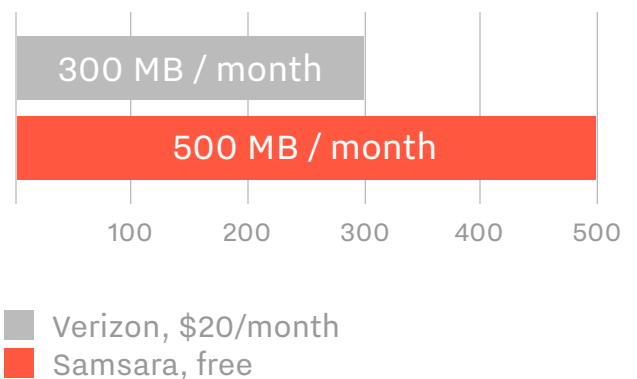

## No Hardware, Carrier Contracts, or IT Complexity

- Hotspot functionality built in to VG-series gateways
- Data connectivity included with Samsara service
- No new IT systems

## Eliminate Monthly Data Fees

- 500 MB WiFi data per vehicle per month included with Samsara service
- Capacity for thousands of emails and web pages or hundreds of photos

# Lowers the cost and complexity of complying with the FMCSA ELD Mandate

Fleets are increasingly turning to mobile apps to electronically log Hours of Service in compliance with the upcoming FMCSA ELD Mandate. While ELD apps for smartphones and tablets offer a host of advantages over proprietary logging devices, cellular data fees can dramatically increase the cost of compliance.

Samsara's WiFi Hotspot works seamlessly with Samsara's ELD-ready driver app. With both Hotspot and Driver App included with the Samsara service at no additional cost, Samsara provides a complete, easy-to-deploy, and cost-effective compliance solution.
